

The Microchip

and "the Mark of the Beast"

Dr Carl W. Sanders is an electronics engineer, inventor, author and consultant to various government organisations as well as IBM, General Electric, Honeywell and Teledyne. He is also a winner of the President's and Governor's Award for Design Excellence.

"Thirty-two years of my life was spent in design engineering and electronics—designing microchips in the Bio-Med field.

In 1968 I became involved, almost by accident, in a research and development project in regard to a spinal bypass for a young lady who had severed her spine. They were looking at possibly being able to connect motor nerves, etc.

It was a project we were all excited about. There were 100 people involved and I was senior engineer in charge of the project. This project culminated in the microchip that we talk about now—a microchip that I believe is going to be the positive identification and "the Mark of the Beast".

This microchip is recharged by body temperature changes. Obviously you can't go in and have your battery changed every so often, so the microchip has a recharging circuit that changes based upon body temperature changes. Over one-and-a-half million dollars was spent finding out that the two places in the body that the temperature changes the most rapidly are in the forehead (primary position), right below the hairline, and the back of the hand (alternative position).

Working on the microchip, we had no idea about it ever being an identification chip. We looked at it as being a very humanitarian thing to do. We were all excited about what we were doing.

We were doing high-level integration for the very first time. This team was made up of people out of San Jose, people out of Motorola, General Electric, Boston Medical Center—it was quite a group of people.

My responsibility had to do with the design of the chip itself, not the medical side of it.

As the chip began to evolve, there came a time in the project when they said that the financial return on bypassing severed spines is not a very lucrative thing for us to be into, so we really need to look at some other areas. We noticed that the frequency of the chip had a great effect upon behaviour and so we began to branch off and look possibly at behaviour modification.

The project almost turned into electronic acupuncture because what they ended up with was embedding a microchip to put out a signal which affected certain areas. They were able to determine that you could cause a behavioural change.

One of the projects was called the *Phoenix* Project which had to do with Vietnam veterans. We had a chip that we called the Rambo Chip. This chip would actually cause extra adrenaline flow.

I wonder how many of you know that if you can stop the output of the pituitary gland (the signal from the pituitary gland that causes oestrogen flow), you can put a person into instant menopause and there is no conception. This was tested in India and other different parts of the world. So here you have got a birth control tool, based on a microchip.

Microchips can also be used for migraine headaches, behaviour modification, as upper/downer, sexual stimulant and sexual depressant. This is nothing more than electronic acupuncture, folks!

There are 250,000 components in the microchip, including a tiny lithium battery. I fought them over using lithium as a battery source but NASA was doing a lot with lithium at that time and it was the going thing. I had talked to a doctor at Boston Medical Center about what that concentration of lithium in the body could do if the chip broke down. He said that you would get a boil or grievous sore.

As the development moved along, I left the project and came back as a consultant several times. I was used in many meetings as an expert witness in regard to the uses of the microchip.

I was in one meeting where it was discussed, "How can you control a people if you cannot identify them?" People like Henry Kissinger and CIA folk attended these meetings.

It was also discussed, "How do you make people aware of the need for something like this chip?" All of a sudden the idea came: "Let's make them aware of lost children, etc."

This was discussed in meetings almost like people were cattle. The CIA came up with the idea of putting pictures of lost children on milk cartons. Since the chip is now accepted, you don't see the pictures any more, do you. It's served its purpose.

As we developed this microchip, as the identification chip became the focal point, there were several things that were wanted. They wanted a name and an image (picture of your face), Social Security number with the international digits on it, finger print identification, physical description, family history, address, occupation, income tax information and criminal record.

I've been in seventeen "One World" meetings where this has been discussed, meetings in Brussels, Luxembourg, tying together the finances of the world.

Just recently in the newspapers they've talked about the Health Care Program, the "Womb to Tomb" identification! A positive identification. There are bills before Congress right now that will allow them to inject a microchip in your child at the time of birth for identification purposes.

The President of the United States of America, under the "Emigration of Control Act of 1986", Section 100, has the authority to deem whatever type of identification is necessary—whether it be an invisible tattoo or electronic media under the skin. So I think you have to look at the facts, folks: this is not coming as some big shock. The paving has been done ahead of time!" ∞

GEORGE BUSH

The Unauthorized Biography

Read how the Bush family made its money promoting Hitler and the Nazi war machine; George Bush's connections to drug trafficking; the CIA; and the many stories behind the stories. Rare and hard-to-get book!

Price: \$40.00 includes p&h within Australia

NEXUS MAGAZINE

PO Box 30, Mapleton Qld 4560
Ph: (074) 42 9280; Fax: (074) 42 9381
